*Whole-home rebate requires completion of weatherization recommendations made during a Home Energy Assessment. Assessment site ID provided during visit.

Eligibility

In addition to existing residential heat pump eligibility criteria:

- Heat pumps must be sized to be capable of being the sole source of heating in the home.
 - Project may include backup or supplemental heat from non-fossil fuel sources, such as a wood or pellet stove or electric baseboard (resistance) heat, including in spaces that are difficult to serve with air source heat pumps like bathrooms.
- Project must either include the removal or disconnection of the pre-existing heating system or the homeowner must not use the pre-existing heating system unless there is an emergency (either heat pump maintenance down-time or if heat pump is not able to heat the home during extreme weather event).
- Weatherization recommendations made during a Home Energy Assessment must be complete prior to heat pump installation.
- Homes must be occupied full time during the winter heating season.

Customer Verification

- Homeowner will use heat pumps as the sole source of heating in home. Select the option that applies:
 - Pre-existing heating system has been removed
 - Pre-existing heating system has been disconnected
 - Pre-existing heating system will only be used in an emergency situation (as outlined above)
- Homeowner understands that heat pumps may be subject to post-installation inspections prior to receiving rebates
